Part C: Answer the following word problems using multiplication

Kyle had 39 jelly beans left over from the enormous bag of Jelly Bellies his parent bought him for scoring his first hat trick of the season. He was feeling sick after eating over 100 jelly beans, so he planned to give the rest of his jelly beans to his friends: Kale, Josh, Koby and Blake. While dividing up his remaining candy, two of them fell on the floor, and his dog Comet ate them.

Kyle wants to be fair, so each of his friends needs to have the same amount. How many jelly beans can he give to each of them? Are there any left over? Show your work below:

Maya loves baking, and she decided to make a double batch of jumbo cookies for her friend Chloe's birthday party. The recipe called for 8 cups of flour, 3 cups of sugar, 4 eggs, a whole bag of chocolate chips, and a bunch of other ingredients. The recipe said it would make 9 - 10 six inch cookies. How many cookies will she have made for Chloe when she is done. Show your work, and don't forget to show both possible answers.
